

TRADEPROFIT · BSC MAINNET (CHAIN 56)

TradeProfit

Institutional Yield Strategy & Network Growth

01

Simplicity

Single asset (BEP-20 USDT on BSC).
Unified vault contracts. Minimum 20
USDT to start yield generation.

02

Trust

Frictionless Web3 wallet connectivity.
Audited non-custodial deposit
routing. Splits funded solely by net
trading profits.

03

Growth

24-hour auto-compounding cycles
paired with a sustainable 20-level
unilevel commission matrix.

We Only Win When You Win

Platform revenues are strictly tied to actual fund returns, discarding copy-trading latency entirely.

Consolidated Capital Pool: All user capital consolidates into a unified custody wallet for fund-level execution, eliminating copy-system latency, slippage, and price delays.

Unified Fund Decisions: Allocations execute at the fund level; the platform dashboard displays a proportional share of the combined pool balance.

Symmetric splits: Yields and drawdowns distribute proportionally. Capital deployment is authorized precisely via the Start/Stop Trade toggles.

Last Day Gross Return
Illustrative performance **+2.51%**

7-Day Gross Return
Net aggregate **+16.2%**

30-Day Gross Return
Compound average **+73.71%**

Past performance does not guarantee future results. Illustrative metrics only.

Try the Platform Before You Invest

Yield engines allow risk-free sandbox evaluations before live capital lockup.

01

One-Time Demo Vault

Company-funded virtual principal. No USDT deposit required for the first vault to run a 10-day evaluation.

02

Activate Live Yield

Deposit committed USDT to secure demo profit. Activates a standard 30-day lock on principal.

03

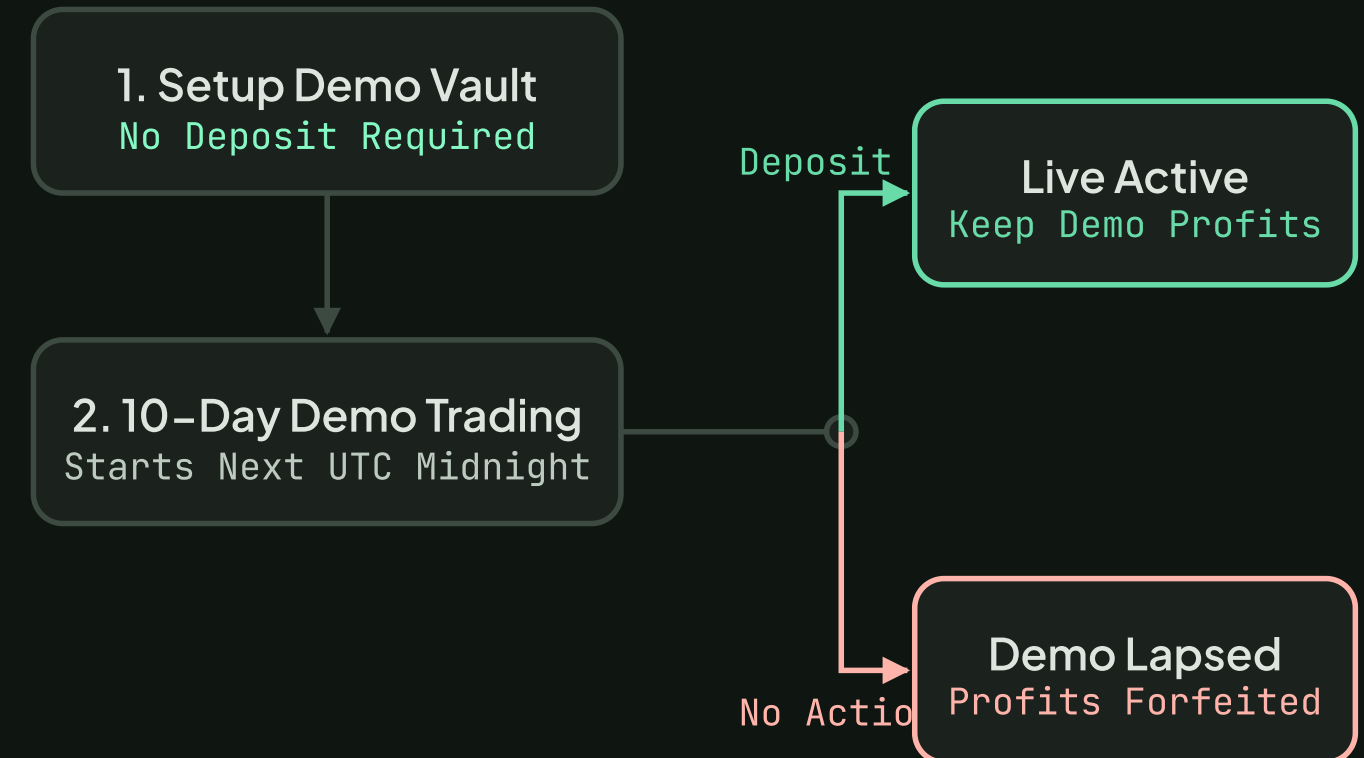

Midnight UTC Start

Demo vaults do not trade on creation day. Trading starts at the next UTC midnight cycle.

04

Locked Identifiers

Displayed strictly as "Demo Account N". Renaming is blocked until live activation is completed.

Demo accounts do not earn referral rewards.

Flexible Splits. Automated Upgrades.

Your capital volume determines the profit split. Higher tiers automatically unlock as compounding increases your principal.

25% Incentive Pool allocation: A fixed 25% of gross net trading profits is carved out across all tiers to power the 20-Level unilevel affiliate network.

Compounding Efficiency: Larger principal bases automatically transition to higher tiers, lowering administrative splits and leaving more yield on your balance sheet.

TIER	CAPITAL RANGE	INVESTOR	INCENTIVE	ADMIN
STARTER	20 - 99 USDT	50.0%	25.0%	25.0%
PROFESSIONAL	100 - 999 USDT	60.0%	25.0%	15.0%
INSTITUTIONAL	1,000+ USDT	70.0%	25.0%	5.0%

* Tiers update in real time at the UTC 00:00 compounding sweep based on active staking balance.

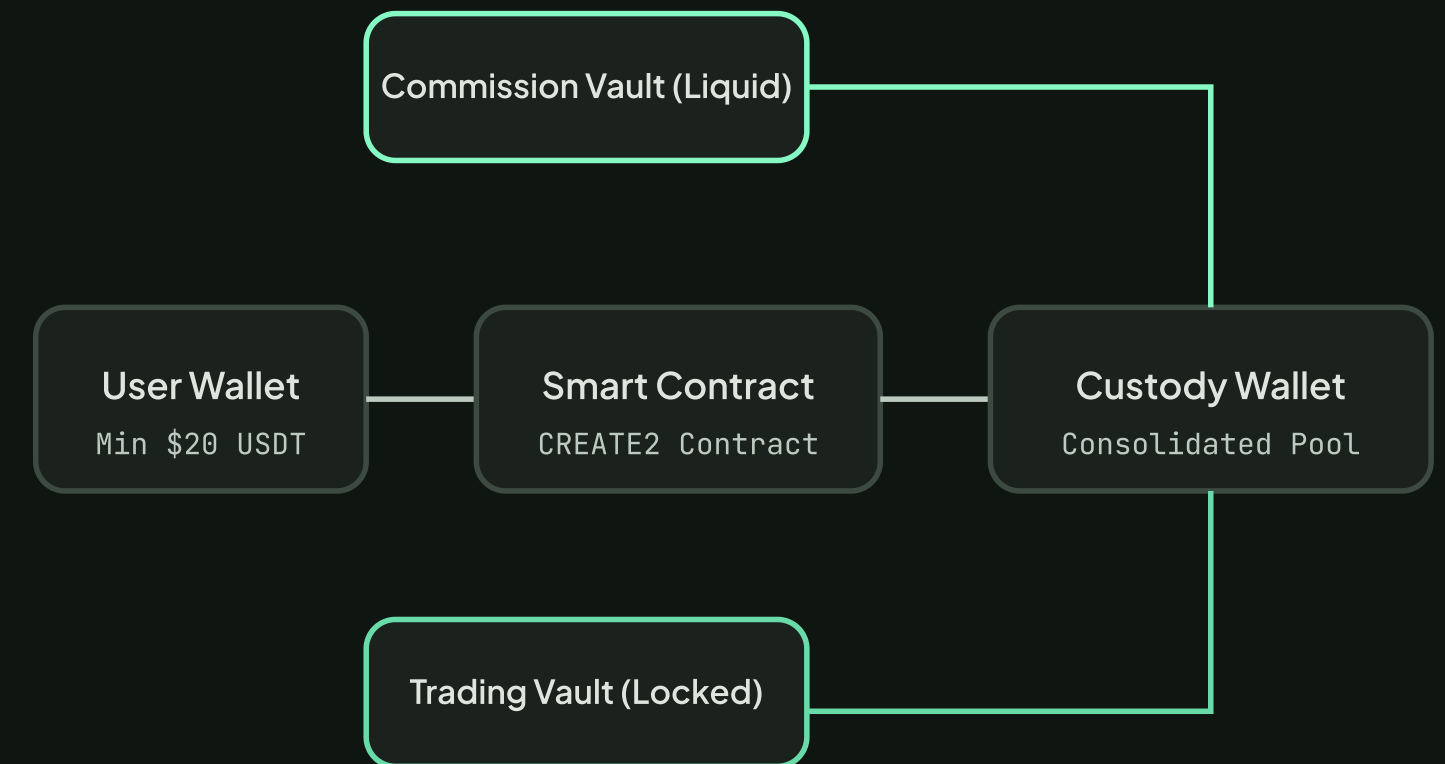

Staking & Liquidity Flow

Non-custodial forwarding routes deposit transactions securely to custody contracts on the BSC network.

USDT BEP-20 Standard: Limits gas overhead and supports instant block validations, avoiding high transaction fees entirely.

Isolated Vault Ledger: Every fresh stake initiates a unique Trading Vault instance tracked on-chain with its own 30-day liquidity timeline.

Trading Vault vs Commission Vault: Locked principal yields are isolated from affiliate payouts. Referral earnings bypass 30-day locks and route directly to the Commission Vault.

Rigorous Trading Controls

Execution boundaries protect core user positions while optimizing daily yield captures.

Start Trade: Triggers capital allocation deployment starting from the next UTC calendar day's cycle.

Stop Trade: Completes the current day's active trade run. Deploys trading freeze from the following calendar day to allow penalty-free principal withdrawal.

00:00 UTC Compound Sweep: Daily yields sweep automatically at midnight, compounding balances to expedite tier upgrade progressions.

DEFERRAL RULES

Symmetric Loss Deferrals

Platform drawdowns are absorbed proportionally. Principal deductions are deferred until global daily settlement sweeps are initiated.

TIERED SPLITS

Performance Margins

Retain between **50%** and **70%** of gross daily yield margins. Upgrades compound without administrative delays.

Enforcing Liquidity Stability

Controlled exit schedules secure platform capital allocations and prevent abrupt run on pools.

Standard Staking Lock: All fresh deposits or demo activations incur a mandatory 30-day principal lock to ensure operational trading consistency.

Auto-Compound Acceleration: Daily rewards automatically roll back into the locked balance. Realized interest compounds without restarting the original 30-day principal lock timer.

STABILITY TARGET

Prevention of Flight

Lock periods restrict rapid capital movements, ensuring algorithmic execution parameters remain stable during trade windows.

EXEMPTION STATUS

Liquid Referral Commissions

Affiliate payouts routed to the Commission Vault are completely liquid. Withdraw or compound team rewards without lock limitations.

Liquidity Exit Pathways

Clear fees enforce liquidity commitment while providing options for emergency retrievals.

Daily Profits: Yield allocations are entirely liquid and withdrawable at a standard 1.0% processing fee.

Emergency Exit: Users can execute an emergency exit to instantly halt all active vault trades. Principal remains locked until the next UTC 00:00 sweep. Excludes demo accounts.

Commission Forfeit: Initiating an Emergency Exit immediately routes the user's pending commission rewards to the company treasury on the exit day.

PATHWAY	LOCK STATUS	EXIT FEE
Daily Profit	Always Liquid	1.0%
Standard Principal	Expired (>30d)	1.0%
Early Principal Exit	Active (≤30d)	25.0% + 1.0%
Emergency Exit	Live Vault Only	25.0% Penalty

* Stop Trade confirmation is required before standard principal withdraw operations can compile successfully.

Sustainable Incentive Architecture

The 25% affiliate allocation is funded entirely from positive performance yield margins, protecting protocol health.

Mathematical Sustainability: Payout distributions trigger only on actual net gains (gross returns minus daily losses). Flat or negative trading days yield zero commission payouts, preventing system inflation.

Idempotent Accounting: Unique hashes track distributions for each downline user per daily window, making settlement execution safe from double-payouts.

CALCULATION CYCLE

Daily Settlement Window

Commissions process once per UTC day at midnight. Deferring transactions to daily blocks prevents high transaction fees.

VAULT DIRECT DIRECTION

Commission Vault Sweeps

Earnings automatically route to the Commission Vault daily. Users are free to withdraw or manually restake to Trading Vaults.

Unilevel Payout Rates

A structured unilevel map providing deep builder incentives while capping payouts at 25% of net trading returns.

Direct Referral: L1 payouts award 10% of downline net yields directly to the sponsor.

Mid-Tier & Deep Matrix: Depth levels reward builders with granular shares down to 20 levels deep, scaling builder motivation as networks expand.

DEPTH TARGET	COMMISSION RATE	ALLOCATION POOL
Level 1	10.0%	Direct Referrals
Level 2	5.0%	Sub-tier 1
Level 3	2.0%	Sub-tier 2
Level 4	1.0%	Sub-tier 3
Levels 5 - 10	0.5% each	3.0% aggregate pool
Levels 11 - 20	0.4% each	4.0% aggregate pool
Total Allocation	25.0%	Net Trading Gains

Protocol Access Criteria

Commission depth is linked directly to active recruitment metrics to ensure genuine builder participation.

RULE OF DEPTH

1 Active Referral = 1 Level Unlocked

Payout depth maps 1-to-1 to your count of direct active referrals. Sponsors must maintain 20 active referrals to unlock the entire 20-level matrix.

DASHBOARD INTEGRITY

Interactive Team Panel

The client interface displays live partner counts, team volumes, and details for both live deposits and demo account balances.

ACTIVE METRIC 1

Minimum Active Balance

A referee must maintain a principal balance of at least **\$20.00 USDT**. Balances below this threshold will not count towards unlocking.

ACTIVE METRIC 2

Trading Status Toggle

Direct affiliates must keep their active trading status toggled to **ON** (`isTradingActive = true`). Paused accounts do not qualify sponsor depth.

* Team panels isolate `demoPrincipal` and `demoAccountCount` for UI stats without altering the live calculation layers.

Evaluate With Confidence

"We do what emotion cannot: execute with discipline."

Experience First: One-time 10-day Demo Vault, zero upfront deposit. Evaluate before investing.

Mandatory referral link: Registration is invitation-only.

* Risk: Trading involves capital loss risk. Past results and sandboxes do not guarantee real returns.

Personal Staking Deposit \$10,020 USDT

Referral Network TVL \$50,000 USDT

Investor Yield (INSTITUTIONAL (70% split)) \$842 USDT

Network Payout (Est. L1-L5) \$120 USDT

Total Est. Annual Yield \$962 USDT
